```
The present amino acid sequence is the mouse lymphoid derived dendritic cell adhesion molecule, LDCAM. It is found on lymphoid derived dendritic cells and displays homology to adhesion molecules, B7-1 and cyroplasmic region of B7-L1. Mouse LDCAM is found on whole embryo, testes, triple negative cells murine splenic and lymph node CD8+, S49.1 and dendritic cells. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cells or

The present sequence is a novel human cell surface receptor protein (HCSRP) designated HCSRP-8. The nucleotide sequence was identified in Incyte Clone 312266 from the cDNA library LUNGNOTO2, which was made from Incyte Clone substance. A number of Incyte Clones were used to assemble the consensus sequence. BLAST analysis showed that the sequence is homologous to immuno superfamily protein B12 31779242. HCSRP and its antagonist are useful for preventing or treating disorders associated with decreased or increased expression or activity of HCSRP. Such disorders include cancers such as leukaemia and melanoma, immune disorders unclude cancers such as leukaemia and atherosclerosis, bacterial and parasitic infections and neuronal disorders such as athematoid arthritis, asthma and atherosclerosis, bacterial and parasitic infections and neuronal disorders such as athematoid arthritis, asthma and atherosclerosis, colymples and polymuleotides encoding HSCRPs may be used as hybridisation probes to disponse these conditions. Anti-HCSRP antibodies may be used as magnosists, as a targeting or delivery mechanism for bringing pharmaceutical agents into contact with cells or tissues expressing HCSRP and for diagnosis of HCSRP-related disorders. HCSRP and its catalytic or immunogenic fragments are useful for drug screening using libraries of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAPPGLRIKILLILIFSAAALIPIGGGONLFTKDVTVIEGEVATISCQVNKSDDSVIQLLN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human cell surface receptor protein and polynucleotide useful for diagnosis, prevention and treatment of cancer, immune disorders, infection and neuronal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 AAPPGLRLRLLLLLSAAALIPTGDGQNLFTKDVTVIEGEVATISCQVNKSDDSVIQLLN

The present amino acid sequence is the human lymphoid derived dendritic cell adhesion molecule, LDCAM. It is found on lymphoid derived dendritic cells and displays homology to adhesion molecules, B7-1 and cytoplasmic region of B7-L1. Human LDCAM is expressed in breast, retina, foetal liver, spleen and heart, lung, muscle, placenta, thyroid and lung carcinoma. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and sequentially control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for treating the effect of organ and bone marrow transplant rejection and for modulating T cell immune responses. LDCAM polypeptides may also be used as carriers for delivering agents attached to T cells or

The invention relates to an isolated polynucleotide (I) comprising one of 245 sequences (ABQ93288-ABQ93332). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).
(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for detecting cell proliferative disorder associated with tumour suppressor lung cancer 1 (TSLC1) in a subject. The method comprising contacting a cell component of a proliferating cell with a reagent that detects level of the cell component in the proliferating cell and determining modification in the component in proliferating cell as compared with a healthy cell, where modification indicates disorder associated with a healthy cell, where modification indicates disorder associated with TSLC1. The method is useful for detecting a cell proliferative disorder (e.g. liver, lung or pancreatic cancer) associated with tumour suppressor lung cancer (TSLC1) in a subject. The invention is useful in gene therapy and for treating a cell proliferative disorder such as lung cancer (human non-small cell lung cancer), liver cancer (hepatocellular cancin cancer cancer cancer (hepatocellular carcinoma) or pancreatic cancer associated with modification of TSLC1 production, where a reagent which modulates (preferably, increases) TSLC1 level in the cells, is employed. The present sequence is human TSLC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PNRQTIYFRDFRPLKDSRFQLLNFSSSELKVSLTNVSISDEGRYFCQLYTDPPQESYTTI 120

The invention relates to an isolated nucleic molecule that is at least CC 95% identical to 18 human cDNA sequences representing 12 novel genes encoding secreted proteins or a polymucleotide fragment of the cDNA sequence contained in American Type Culture Collection (ATCC) deposit No. defined in the specification, its species homologue, a variant or allelic variant of the polymucleotide having a polymucleotide capable of hybridising under conditions the polymucleotide, where the polymucleotide having a polymucleotide capable of hybridising under conditions the polymucleotide, where the polymucleotide having a mucleotide sequence of only A or T residues. Also included are recombinant vectors, host cells (for producing the polympeptide), the secreted polymeptide (comprising a sequence that is at least 95% included are recombinant vectors, host cells (for producing the polympeptide), the coretin, variant, allelic variant or species homologue), antibodies that specifically bind to the polympeptides, domain, epitope, full-length coretin, variant, allelic variant or species homologue), antibodies that specifically bind to the polympeptides, diagnosing, treating, preventing or medical condition and activity in a biological assay (by expressing the collection or a succeptibility to a captuence in a cell, isolating the supernatant in the supernatant and an ectivity.) The polympeptides, nucleic acids and antibodies are useful for diagnosing a pathological condition, for preventing, treating, or amelication or a pathological and blood clotting disorders (many examples are disorders). munological probes for differential identification of the creaticition mapping. The polypeptides and antibodies are useful for chromosome identification, The mucleic acids are also useful for restriction mapping The polypeptides and antibodies are useful for chromosome identification. The mucleic acids are also useful for restrictional propes for decrease storage capabilities, fat content or other nutricional components. The polypeptides and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        138

```
or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates
                                                                                                                                                                                                                                  420

```
the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in reating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that polypeptides or their antibodies. The polynucleotide or the compound that collypeptides or their antibodies. The polynucleotide or the compound that polypeptides is activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

The invention relates to an isolated nucleic acid sequence, or its allelic variant, a fragment of the cDNA sequence, or its fragment, domain, epitope or species homologue. The nucleic acid is useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer, liver disorders such as hepatitis or neural disorders such as Alzheimer's disease. The present sequence represents the amino acid sequence of a novel human secreted protein associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB; ACD13371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO200299122-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.
                                                                                                                                                                              13-AUG-2003
                                                                                                                     ABO07196;
RESULT 10
```

The invention relates to identifying (M1) a candidate p53 pathway conductanting an assay system comprising a purified HM education agent, by contacting an assay system comprising a purified HM p03 pathway in polypeptide (human orthologue of genes that modify the p53 pathway in Drosophila) or nucleic acid with a test agent under conditions, where but activity, and detecting a test agent, the system provides a reference activity, and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell defective in p53 function with a cell (comprising contacting at each activity of the assay system. CC contacting a cell defective in p53 function is restored), modulating (M3) a p53 pathway in a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide comprising and diagnosing (M4) a disease in a patient (comprising: (a) obtaining a biological sample comparison; (b) contacting the sample with a probe for HM expression of identifying modulators of the p53 pathway. A probe for HM expression contently in a patient, where the cancer has greater than 25 % expression level. In a patient, where the cancer has greater than 25 % expression level. Modulators identified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, of a cell, thus restoring the p53 pathway of a cell, thus restoring M3) are useful for modulating the p53 pathway of a cell, thus restoring the p53 pathway such as angiogenic, also proliferation or progression through the cell cycle. (M2) and (M3) are useful for treating defects in the p53 pathway such as angiogenic, also useful for treating defects in the p53 pathway such as angiogenic, apoptotic or cell proliferation disorders in the p53 pathway such as angiogenic, appoptotic or cell proliferation disorders in the p53 pathway such as angiogenic.

The invention relates to identifying (M1) a candidate p53 pathway condulating agent, by contacting an assay system comprising a purified HM collypeptide (human orthologue of ganes that modify the p53 pathway in Drosophila) or nucleic acid with a test agent under conditions, where but contrologue activity, and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p53 function with a candidate modulator contacting the cell with a mammalian cell (comprising contacting the cell with a mapped or a disease in a patient (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) contacting the sample with a probe for HM expression; (C) comparison indicates a likelihood disease). (M1) is useful comparison indicates a likelihood disease). (M1) as useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. (C) in a patient, where disease or disease or disease or cell the p53 pathway, such as, angiogenesis, apoptotic or cell conditations, where disease or disease prognosis is related to proliferation of sorders (G) cancer). Another two new methods (M2 and C) the p53 function of the cell, so that the cell undergoes normal condition or prograssion through the cell undergoes normal condition or prograssion through the cell undergoes normal calso useful for treating defects in the p53 pathway of a cell, cancer also useful for treating defects in the p53 pathway of a cell, calculating defects in the p53 pathway of a cell, calculating defects in the p53 pathway of a cell, calculating defects in the p53 pathway such as angiogenic, also useful for treating defects in the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               138

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying a negent that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expression of a polynucleotide sequence which is differentially expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polyneptides or their antibodies. The polynucleotide or the compound the composition of pain and a pharmaceutical composition comprising the one or more polynetides is activity is useful for preparing a medicament for treating pain and a sparal segmental nerve injury (SNI)) in an animal (e.g. gene context) in the sequence data for this patent did not form part of the printed the specification) which is differentially expressed during pain. Note:

The sequence data for this patent did not form directly from WIPO at the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                          chronic constriction injury; CCI;

The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-prolliferative and immunosuppressive activity. The proteins and polyjvucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TVLVPPRNLMIDIQKDTAVEGEBEVNCTAMASKPATTIRMPKGNTELKGKSEVEEWSDM 196

New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptors/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human nucleic acids encoding secreted and transmembrane polypeptides,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                     1 AAPPGLRLRLLLLLLSAAAL......TAIINAEGGONNSEEKKEYF 423
